SUMMARY

Computer Science student at National Textile University with hands-on experience in AWS cloud infrastructure, Docker containerization, CI/CD pipelines, and Infrastructure as Code. Built production-grade projects including multi-AZ VPC architectures, an end-to-end Jenkins and ArgoCD GitOps pipeline, and CloudFormation IaC deployments. Progressing toward a DevOps engineering role.

EDUCATION

BS in Computer Science — National Textile University

Oct 2023 – July 2027

EXPERIENCE

DevOps and Cloud Engineering — Self-directed

Oct 2024 – Present

- Designed custom multi-AZ VPCs with public and private subnets, Internet Gateways, NAT Gateways, NACLs, Security Groups, ALB, Auto Scaling Groups, Bastion Host SSH jump access, and Route 53.
- Configured IAM users, wrote JSON bucket policies with StringNotEquals conditions, and managed S3 versioning, lifecycle rules, storage class transitions to Glacier, and static website hosting.
- Built single-stage and multi-stage Jenkins pipelines using Groovy. Used Docker as ephemeral Jenkins agent for clean, cost-efficient builds. Deployed Jenkins on EC2 with Java 21 and JAVA_HOME configuration.
- Completed end-to-end CI/CD: Jenkins pulled Java app from GitHub, built with Maven, scanned with SonarQube, packaged into Docker image, pushed to Docker Hub, then ArgoCD synced deployment.yml to Kubernetes via Minikube. Debugged 12 pipeline failures before successful run.
- Deployed EC2 and S3 with CloudFormation YAML templates. Used drift detection and CloudTrail to audit manual configuration changes.
- Wrote Bash script using AWS CLI to check status of EC2, S3, IAM, and VPC resources across an AWS account.

PROJECTS

End-to-End CI/CD — Jenkins, SonarQube, Docker, ArgoCD, Kubernetes [Jenkins](#) · [Maven](#) · [SonarQube](#) · [Docker](#) · [ArgoCD](#) · [Minikube](#)

- GitOps pipeline from code commit to Kubernetes deployment. Forked and customised from Abhishek Veeramalla. github.com/Husnain-Nadeem

AWS Production Architecture — Multi-AZ VPC, ALB, Auto Scaling [AWS](#) · [EC2](#) · [VPC](#) · [ELB](#) · [Route 53](#)

- Multi-AZ VPC with ALB, Auto Scaling (1–4 instances), NAT Gateways, Bastion Host, and load-balanced Python HTTP server across private EC2 instances.

S3 Static Website Hosting and IAM Access Control

[AWS S3](#) · [IAM](#) · [Bucket Policies](#)

- Hosted static site on S3. Configured public access and GetObject policy. Wrote JSON deny policies restricting access to root-only using StringNotEquals on PrincipalArn.

CloudFormation IaC — EC2 and S3 Deployment

[CloudFormation](#) · [YAML](#) · [AWS](#)

- EC2 and S3 deployed via YAML template. Drift detection plus CloudTrail used to identify and audit manual changes.

AWS Resource Checker Script

[Bash](#) · [AWS CLI](#) · [Linux](#)

- Bash script checking status of AWS services in a given account. github.com/Husnain-Nadeem/Aws-resource-checker-script

Django App Deployment on Docker and EC2

[Docker](#) · [Python](#) · [Django](#) · [EC2](#)

- Containerized Django app on EC2. Debugged port mapping and Security Group rules to expose the application publicly.

CERTIFICATIONS

AWS Cloud Practitioner Essentials | Job Roles in the Cloud

TECHNICAL SKILLS

Cloud: AWS — EC2, VPC, IAM, S3, ELB, Route 53, Auto Scaling, NAT Gateway, CloudFormation, Security Groups, NACL

CI/CD & DevOps: Jenkins · ArgoCD · GitOps · Groovy · SonarQube · Maven · Docker · Docker Hub · Minikube · kubectl

IaC: AWS CloudFormation (YAML/JSON) · Terraform (learning) · Ansible (learning)

Linux & Scripting: Linux administration · Bash scripting · SSH · AWS CLI

Programming: Python · Bash · C++ · C

Version Control: Git · GitHub
